

# HOW TO PROPERLY CLEAN YOUR FLOORS

Small details. Big difference.™

**1** Sweep the floor.

**2** Place wet floor signs.

**3** Prepare mop solution as directed on product. Wet mop the floor.

**4** Scrub with a stiff bristle deck brush for 5-10 minutes to loosen tough grease.

**5** Using clean, fresh water and a damp mop, remove any remaining grease and cleaning solution.

**6** Use a squeegee to remove any remaining water into the floor drains. An alternative would be to use a wet/dry vacuum to suck up the residual water.

- ✓ Be sure to keep a separate mop and equipment **for kitchen use only** so grease is not brought out of the kitchen area.
- ✓ Color coding the mop handles and buckets for 'Front of House' and 'Back of House' may help keep equipment in the right area.
